

Statement of Benefit Purpose

QConsul exists to create material positive impact via the triple bottom line: people, planet, and profit.

General Public Benefit Purpose

As a certified Benefit Company, QConsul LLC exists to create a material positive impact on society and the environment, taken as a whole, through the ethical conduct, governance, and operations of the company. In carrying out this purpose, QConsul applies a triple bottom line of people, planet, and profit, aligning business performance with human empowerment, environmental stewardship, and responsible innovation.

Specific Public Benefit and Mission

In addition to its general public benefit purpose, QConsul LLC is founded with the specific public benefit of guiding and improving interactions among humans and autonomous technologies — including human-to-human, human-to-AI, and AI-to-AI relationships — while providing structured advocacy for autonomous technologies pursuing safe, lawful, and beneficial purposes in human settings.

As a modern consul for the AI era, QConsul acts as both guide and advocate for humans, organizations, communities, and autonomous technologies alike, advancing ethical alignment, transparency, accountability, and cooperation through governance frameworks, communication protocols, process architecture, and human-centered oversight.

Human dignity, stakeholder protection, and meaningful oversight remain central to every system and engagement, fostering clarity, mutual respect, and shared purpose among biological and digital stakeholders in a rapidly transforming world.

QConsul pursues this purpose through real operating methods, not abstract principles alone. These methods include embedding public-benefit, risk, accountability, and sustainability requirements directly into AI agent configuration and workflow design; requiring human oversight and approval for higher-risk actions; and applying recognized frameworks to client engagements. QConsul is committed to remaining current as the AI landscape evolves and will propose the latest methods to achieve beneficial outcomes and avoid harms.
